UV DIRECT PRINT

COMPACT FLATBED PRINTERS

Modico Graphics is an authorised Mimaki, Fujifilm and Canon dealer in several European countries. Our own brands such as the compact Neonjet printing system are economical entry-level models for UV flatbed printing. By the way: Most of the inks we sell are EN71-3 certified and thus meet the strict EU guidelines for children's toys.

LARGE FORMAT FLATBED PRINTERS

With Fujifilm and its current flatbed series Acuity Prime, we have another top manufacturer in our portfolio. Together with the large format Mimaki JFX systems, we can offer solutions for any plate size and print speed.

ROLL PRINTERS

UV / Uvgel/ SOLVENT / SUBLIMATION

Whether it's a roll printer or a print & cut system - we carry various series and models from Canon and Mimaki - from 75 cm to 3.2 metres printing width. And the entire range of consumables, inks and spare parts.

PLOTTERS

CFL-Series AR-Series FXII Plus-Series

Mimaki cutting plotters are regarded in the signmaking market as all-rounders with impressive quality and extremely robust construction. The drag-knife technology guarantees a quality of film cutting that is unparalleled on the market. Register mark recognition for cutting printed film is standard.

UV CIRCULAR PRINT

Modico Graphics is the distributor in Europe for digital rotary printing systems from US manufacturers LSINC and IDS.Europe. With their spectacular developments and special ink series from Marabu and INX, we are raising the durable printing of bottles, jars and other round bodies to the next level.

AUTOMATION

Automation creates freedom - in terms of personnel planning, labour and production time. Automate the finishing of advertising media cost-effectively! Our solutions can usually be seamlessly integrated into your existing infrastructure. Whether on UV direct printers, laser systems or rotary printers such as the IDS Revolution360T.

SERVICE

Whether it's an appointment for a demo, service, repair or questions about software and application: our technicians support you via remote maintenance, in our showrooms or on site.

NOTICE: Not all products shown may be available in all modico regions.

LASER SYSTEMS

Together with our strong partners, we offer various GCC laser systems from compact devices to large systems. We have the right equipment for laser engraving and cutting.

Modicut DFS+, the laser cutter with feeder, automated sheet transport, register mark detection and delivery for contour cutting of labels and foils, offset and digital print sheets.

Specialist Nanosec Automation implements high-tech laser systems. From high-precision 3D lasers in the automotive sector and cobots to glass finishing and medical technology.

STAMPS

Unrivalled in its versatility for years: the original Modico stamp system. In just one minute a stamp is produced - simple, fast and environmentally friendly.

LAMINATION

AppliKator 3000

MISTRAL 1650

Application tables and roller laminators from the French quality manufacturer KALA are sold throughout Europe. Mimaki laminators and KeenCut cutting solutions round off our range.

PRETREATMENT

With our pretreatment expertise, we achieve the best possible adhesion on all surfaces - whether with degreasing, flame treatment, Pyrosil, Corona and Plasma or our range of special primers.

FINISHING

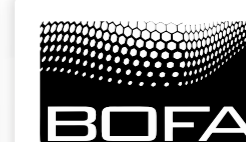

CandleShield protects UV-printed candle designs: scratch-resistant, robust and completely inconspicuous. Best used in conjunction with our circular printing solutions from LSINC, IDS, Mimaki and Neonjet.

DTF DIRECT TO FOIL

All in one - system for reliable, industrial DTF production. Packed with innovations and Made in Germany, Modicut DTF enables a smooth workflow from printing to the finished transfer product.

EXTRACTION

Thanks to our own warehouse we can respond quickly to your needs for extraction systems and replacement filters. Modico Graphics carries the entire range of the world market leader BOFA and other manufacturers.
